

DHEA, dehydroepiandrosterone

60 capsules (100 mg)

Product code: CP6391

Of all the body's hormones, dehydroepiandrosterone (DHEA) is found in the greatest amounts. Studies show that DHEA levels drop significantly in men and women after age 35. It is a metabolic precursor to other hormones and is critical to the optimal function of almost every component of the body.* DHEA is the crucial natural counter balance to the immune suppressive, catabolic hormone cortisol. We recommend that DHEA be taken once daily in the morning to mimic the body's normal rhythm.

Recommended Dosage: 10 to 25 mg for women, 25 to 100 mg for men.

Product Cautions: All users should have serum levels checked. Men with prostate cancer or elevated PSAs should use DHEA under physician's supervision. Taking 100 mg or more may produce facial hair growth in women.

Shipping Restrictions: No import to: Australia, Brazil, Canada, Japan, Switzerland, United Kingdom (Great Britain)
